ALL AND THE STATE OF THE TOTAL TO THE TOTAL TO THE TOTAL TOT
                                            available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TH genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is proceeded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note="Rv1566c, (MTCV336.37), len: 230. Function: unknown probably exported has QQAPV repeats at C-terminus, similar to hypothetical M. leprae protein, to putative invasins 1,2(007390, 007391) from M. avium and slightly similar to C-terminus of Listeria invasion-associated protein p60 precursor P60_LISMO P21171. gene

```
available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers.

Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparese (Krogh) supplemented of TB genes implemented in TBparese (Krogh) supplemented of TB genes in increase in the observed/expected third position G + C.

GAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (Atg., 9tg., or 'ttg) which is preceded by an upstream ribosome binding site sequence (Optimally 5-13bp before the initiation codon. If this cannot be identified we choose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                  Parkhilly.

Direct Submitssion

Submitted (11-JUW-1998) Submitted on behalf of the Mycobacterium tuberculosis sequencing and mapping teams, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 1SA Unite de Genetique Moleculaire Bacterienne, Institut Pasteur. 28 rue din Docteur Roux, 75724 Paris Cedex 15, France E-mail: parkhill@sanger.ac.uk on Jun 27, 1998 this sequence version replaced gi:1405752.

Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markow Model of TB genes (mplemented in TBparse (kroyh) supplemented with visual inspection of positional base preference in codons, especially where there is an interess. In the observed/expected third position of 4C an interess. In the observed/expected third position of a correct initiation codon. Where possible we choose an initiation codon (algorithms) give sequence (optimally 5-13bp before the initiation codon pointing site sequence (optimally 5-13bp before the initiation codon codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               tuberculos is sequencing and mapping teams, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CBIO 15A Unite de Genetique Moleculaire Bacterienne, Institut pasteur, 28 rue du Docteur Roux, 75724 paris Cedex 15, France E-mail: parkhill@sanger.ac.uk on Jun 27, 1998 this sequence version replaced gi:2104370.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         probable precursor of serine protease. Has putative signal peptideat N-terminus and hydrophobic stretch at C-terminus. Contains three signatures typical of subtilase family: aspartic acid active site (PS00136), histidine active site (PS00137), serine active site (PS00138). FASTA results: 053863 SERINEPROTEASE (199 aa) opt: 241; E(): 8e-07; (38.0% identity in387 aa overlap), similar to MTCX15F10.29 (45.7% identity in 451 aa overlap)"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CANTION: In some cases we may not have predicted the correct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Опклочи шетргане
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CADTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon data, gray, or tray which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream codon.

                                                                   TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                             COMMENT
```

```
probable precursor of serine protease. Has putative signal peptideat N-terminus and hydrophobic stretch at C-terminus. Contains three signatures typical of subtilase family: aspartic acid active site (PS00136), histidine active site (PS00137), serine active site (PS00138). FASTA results: 9G3863 sERINEPROTASE (390 aa) port: 241; E(): 8e-07; (38.0% identity in 87 aa overlap), similar to MTCY15F10.29 (45.7% identity in 451 aa overlap)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ROSSSKEAPVGDPSSTGVGDVDTMARAVRTAADLGASVINISSIACVPAAAAPDDRAL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have ulter renumbered from the original cosmid submissions but the old gene designations are in brackets after the may gene numbers.

Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C.

CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon where possible we choose an initiation codon where possible we choose an initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon fall, speceded by an upstream ribosome binding site sequence (optimally 5-13pp before the initiation codon) If this cannot be identified we choose the most upstream

	Notes: Details of M. Luberculosis sequencing at the Sanger Centre are available on the World Wide Web. (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base predictence in codons, especially where there is an increase in the observed/expected third position G to CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (arg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon. If this cannot be identified we choose the most upstream initial or	Trocation/Qualifiers 1. 38380 /organism="Mycobacterium tuberculosis H37kv" /strain="H37kv" /strain="H37kv" /strain="H37kv" /db_xref="taxon:8332" /db_xref="taxon:83312" /db_xref="taxon:83312" /clone="taxon:83312"	/qcne="hycu" /qcne="hycu" /qcne="hycu" /qcne="ky0084, (MTCY251.02), len: 316,hycD, similar to HYCD_EXCOLD PLAG LOTMate hydrogenlyase subunit 4 (307 aa) FASTA SCOLES, upt: 570, score: 591.6, E(): 2.1e-26, (4.4.8% identity in 405 ac overlap) and NUOILECOLT F1460 hadowerlap) cold acoverlap) /ccdon_start=1 /transl_table=11 /ccdon_start=1 /transl_table=11 /product="hycD" /db_xref="G1:1405754" /db_xref="G1:1405754"	DLLKOLGKQOITPAGTTIVPAAPVIVAGTTLLIAAAAPLWATGSPLDPSADLEAVUR ELECTVALTLAGIDTGTSFGGGGASRETTLALABATPLWATGSPLDPSADLEAVUR LEFGTVALTLAGIDTGTSFGGGGASRETTAALWEPTILLAVFALSIPAGSANLGAL VASTIDHPGHVVSLAGVLAFVALVIVLAGATGRAPTHLELTWHEAMVLEYAG PRIALVEWAAGMRLVVLALLANIELPWGIAGAAPTALLDVITGVVAVAAKVAILAVLL ATFEVFLAKIRLFRVPELLAGSFLIALAVTAANFFTVGA" 967. 1629 967. 1629 967. 1629 9680e="hycp" 700te="Rv0085, (MTCY251.03), len: 220. hycp, similar to SpIP77524 HYFE,ECOLI HYDROGENASE-4 COMPONENT E (216 aa),FASTA scores: opt: 204 z-score: 272.1 E():1.2e-07; 25.5% identity in 216 aa overlap"
